GreaseSpot #20 AirAudio Tips

The purpose of the 'GreaseSpot' is to share ideas and tips on 'two wheel vehicle' maintenance (Bicycle and Motorcycle). Questions, ideas and tips come from our fellow riders, and they can be on most any topic of maintenance. GreaseSpot #19 focused on 'The Great Spark Plug Debate'. If you would like us to resend this GreaseSpot just let us know (info@greaseninja.com).

Information: AirAudio Tips...

We've received two tips from Don in Montana on how he improved the AirAudio operation with his Garmin GPS.

1) Preventing the GreaseNinja Rubber Band from slipping off the Pick-up Mic.

Don made a hole in the provided 'GreaseNinja' Rubber Band and put the pick-up mic metal tube through the hole and then connected the plastic air tube to the pick-up mic metal tube. This prevents the GreaseNinja Band from slipping off the Pick-up Mic under any circumstance.

2) Eliminating unintentional GPS touch screen 'touches' by hand or clothing when attaching the Pick-up Mic or when riding.

Don placed a piece of sturdy cardboard over the screen after inputting his destination. The cardboard cover is held in place by the GreaseNinja Rubber Band. This worked very well for him, so he fashioned a piece of plastic instead of using cardboard.

We tried both of Don's ideas and they worked well for us.

If you have a tip on maintenance; please share it with us. If we use it, we will send you a GreaseNinja® Spray Tube Kit or a Brush Rag Kit in appreciation. www.GreaseNinja.com

Thanks....Earl
