

GreaseSpot #12 – Oiling Other Types of Chains

The purpose of the 'GreaseSpot' is to share ideas and tips on 'two wheel vehicle' maintenance (Bicycle and Motorcycle). Questions, ideas and tips come from our fellow riders, and they can be on most any topic of maintenance. GreaseSpot #11 focused on Rear Axle Tightening / Maintaining Chain Tension; if you would like us to resend this GreaseSpot just let us know (info@greaseninja.com).

We have been receiving lots of ideas from Riders on using the GreaseNinja on oiling all types of chains besides motorcycles and bicycles, and finally decided to share a brief collection of other uses for your GreaseNinja.

The most recent note we received was from William.

William's Tip:

"Here's a suggestion for another use of the GreaseNinja. I recently visited a friend of mine at his house on the coast in South Carolina. Due to the salt air the chains on his two garage door openers were badly rusted. Even though my GreaseNinja didn't exactly fit the smaller chain of these door openers, it did make the job go faster and I'm sure that using motorcycle chain lube will keep these chains in better shape longer."

Other comments about using the GreaseNinja on other chains:

- Exercise Bikes
- Rowing Machines
- Go Karts
- Industrial Conveyor Equipment

If you have other uses, please let us know.
